(54) CIRCUIT AND METHOD FOR TESTING DRIVER IC

(57)Abstract:

PROBLEM TO BE SOLVED: To reduce the number of pads for tests on the output side of a driver IC, to enable highly accurate needle contact with the pads for tests, and to improve the yields of products.

SOLUTION: As for the arrangement of pads for tests, pads (26-1 and 38) for tests are divided so as to correspond to internal circuits in odd ordinal numbers and internal circuits in even ordinal numbers according to the arrangement order of the internal circuits part 5. The pads for tests provided in correspondence with either the internal circuits in odd ordinal numbers or the internal circuits in even ordinal numbers are commonly connected, and the internal circuits and output pads are made electrically separable. Test information is supplied for the internal circuits of a driver IC 12 from the outside, and the internal circuits and the output pads are electrically connected at the time of a test to test the state of connection between the input and output pads on the basis of the state of signals outputted from the pads for tests connected to the output pads.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
